

GROWTH & HABITAT

SIZE: 30'+, usually smaller
USDA HARDINESS ZONE: 10-11
SOIL: well drained
SALT TOLERANCE: low
ORIGIN: The Republic of Seychelles

LIGHT:

Part Shade/ Full Shade

MOISTURE:

Moderate

DESIGN & AESTHETICS

SHAPE: Single trunk, simple leaf
LANDSCAPE USE: Specimen Palm
FLOWER: Flower stalks up to 6' long, drooping beneath leaves of crown
FRUIT: Spherical, brownish-green becoming red when mature
WILDLIFE: Self-protection from animals via spiny spikes on trunks of younger palms
PLANT DESCRIPTION: The Seychelles Stilt Palm is an erect palm, reaching up to 80' tall in native environments; however, it is usually much shorter. The trunk is very spiny when young, generally smooth but scarred where the leaves have fallen. Additionally, the trunk has numerous aerial roots at the base, adding to the species' uniqueness. The large, long leaves split along the margins irregularly with age, and may appear pinnate. The palm works well as a specimen tree; however, the ideal conditions include a shady location with wind protection.

PESTS & DISEASES:

PESTS: N/A
